MEASUREMENT

Download on the
App Store

GET IT ON
Google Play

TRACKING

- | This function allows you to record the route of all paired and displayed collars on the map
- | When the recording is started, the route starts to be plotted on the map. The line will be stronger at location where the dog is barking
- | Routes can be saved and played again

GEO-FENCE

- | In the app, you can easily mark any space on the map. If your dog leaves this marked area, you will be notified by notification
- | These are so-called virtual fences (zones) and you can mark several of them

WAYPOINTS

- | A function that allows you to save the GPS coordinates of the location where the receiver (handheld device) is currently located
- | You can navigate to the saved point later. Storage of current positions and important places
